

Stop Rink Profits From Melting Away

Because of the damage R-22 refrigerant causes to the environment, it's being phased out by the EPA. Supplies have already decreased — increasing the price — and production of R-22 will cease at the end of 2019.

Fortunately, Honeywell has solutions to help you freeze the ice without freezing out profits including: Genetron Performax® LT and Solstice® N40.

HIGH QUALITY ICE

Honeywell Refrigerants produce high quality ice and reduce energy consumption. One ice arena was able to keep the floor temperature set 3 degrees higher than with R-22. The floor cools faster, the water freezes faster and the compressors don't have to work as hard.

LONG-TERM SAVINGS

Along with the energy savings, Genetron Performax LT and Solstice N40 refrigerants reduce costs over the life of your system. For instance, they have a lower discharge temperature than R-22, reducing compressor wear and lubricant breakdown.

PEACE OF MIND

Both Genetron Performax LT and Solstice N40 refrigerants are nonflammable, non-ozone-depleting, and safer to use than ammonia, which has high toxicity and contributes to poor indoor air quality.

MEET EPA REGULATIONS

Genetron Performax LT and Solstice N40 refrigerants have a lower global warming potential (GWP) than R-22.

EASY RETROFIT

Eliminate the guesswork. We can remove your used refrigerant quickly using environmentally-responsible processes. And, because both Solstice N40 and Genetron Performax LT have a mass flow similar to R-22 and require no thermal expansion valve changes or adjustments, retrofit time is short. Ask your Honeywell representative about conversion support.

70+ YEARS

Honeywell has been at the forefront of refrigerant technology for decades.

“The conversion was a lot faster and cheaper than other alternatives that would have required new equipment and major capital investments.”

Tom Borden, refrigeration technical manager, ORDA (Herb Brooks Arena, Lake Placid)
